

COVID-19 track-and-trace app – for pubs, restaurants, hair salons and more...

Zappify Cov-ID, is a free-to-use digital track and trace system which enables small businesses to meet COVID-19 requirements, designed by two entrepreneurs from Bury, which captures and exchanges contact information on mobile phones, using contactless technology.

It links establishments with consumers through the Zappify platform.

Consumers who register with Zappify on their smart phones instantly receive a personal Cov-ID QR code to scan themselves in and out of those premises using the system.

They only need to register once, as they can scan in and out of the same establishment multiple times or any other Zappify-registered location.

For businesses which sign up to Zappify Cov-ID, the system provides a record of customers attending their premises.

All data is held securely, is GDPR-compliant, and will be stored and deleted in line with government guidance.
